## EDUCATION

### Amrita Vishwa Vidyapeetham, Amritapuri

#### Bachelors in Technology

Computer Science and Engineering  
November 2022 – 2026

## PROJECTS

### TheBooktown — [link](#)

I made a website where people can come and donate books for the poor and needy. This is a simple interface for an NGO, working along with other NGO's to make education a right for everyone.

### HMS — [link](#)

I made a mobile application for efficient management of hostels in a college. This can be extended to various other applications. This provides basic facilities like a complaint management system, student profiles, etc.

### LMS — [link](#)

I made a leave management system where people of an organization can request for a leave form their seniors. This was basically done to automate the leave taking process in our club.

### Martian Chronicles — [link](#)

This application fetches images from the Mars rover API, a facility provided by NASA. With a simple and user-friendly interface, you can easily browse through the images based on a specific date, and save or share photos with others.
